

Pavo Horse Grass Seed

Special grass seed mixture for paddocks

Many paddocks and pastures are sown with grass seed mixtures intended for cattle. These types of grass are not suitable for horses, which need more fibre and less protein. Pastures and paddocks require strong types of grass capable of withstanding trampling and that are resistant to the way in which horses graze. Horses crop grass much shorter than cows. Pavo GrassSeed produces a dense sward and contains healthy herbs with a high fibre content, making it ideal for horse pastures and paddocks.

Important characteristics

- Low fructan index
- Resistant to close cropping due low growing point
- Very dense sward, giving increased resistance to horses' hooves
- High resistance to crown rust, so the grass always tastes good to your horse
- Contains specially selected herbs: including narrow-leaved plantain, fenugreek, wild carrot and parsley

Application

Available in 15kg bags.

Needed per hectare:

- Initial seeding: 45-60 kg / hectare (April - October)
- Re-seeding: 30 kg / hectare (February - March / Middle of August - Middle of October)

The expiry date of Pavo Grass Seed is 24 months after the production date. You can find the production date on the bag. After this period, you can still use Pavo GrassSeed but from this moment on the germination rate of the seeds will start to decrease.

Product Specifications

Contains

Domiatti perennial ryegrass	20 %
Montreux perennial ryegrass (old type)	20 %
Orantas perennial rye grass, forage type, mid-late heading, diploid	20 %
